CAESAR CTI creates a functional connection from telephone to PC. Via software, telephone functions like dialing, put through, conferences or switching between calls can be effected.

The integration of company address books and CRM solutions facilitates the basic outgoing dialing via name input or shows the name and other important information about the caller with incoming calls.

The recording of the telephone conversations follows configurable in the mail client (MS Outlook, IBM Lotus Notes, Novell GroupWise or SAP R/3[®]) so that the user can sight his whole communication in chronological order from calls to facsimile, e-mail, SMS, voice and "Unified Messaging" becomes reality.

In this way, all the advantages of telephone and computer integration are used optimal.
